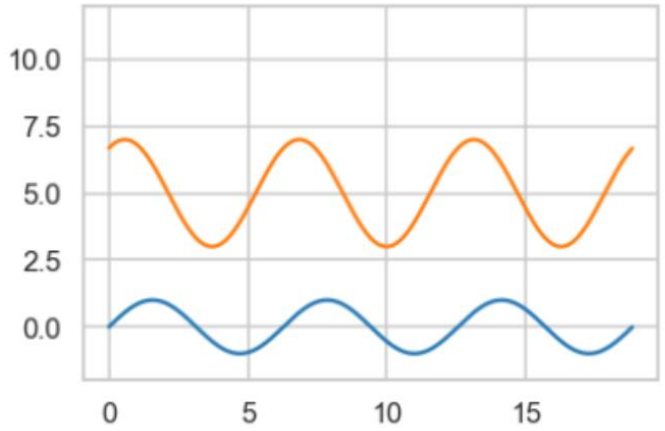
Preprocessing

- The following list represents training set values of a specific attribute.
  - [10, 0, 5, 3, 3, 0, 3, 4, 4, 7, 5, 7, 8, 4, 9]
- Use these values to train an equal-frequency based discretization with three bins (low, medium, high). Which statement is correct?
  a) The test vector [1, 7, 9] is discretized to [low, medium, high]
  b) The test vector [10, 7, 4] is discretized to [high, medium, medium]
  c) The test vector [3, 4, 7] is discretized to [low, medium, high]
  d) The test vector [5, 4, 2] is discretized to [high, medium, low]

Time series

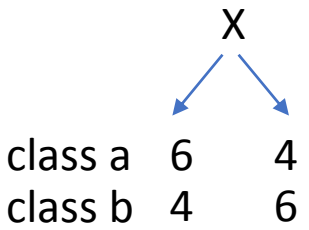
- Which is the most significative pair of features for distinguishing between the two periodic time series depicted in the figure below?

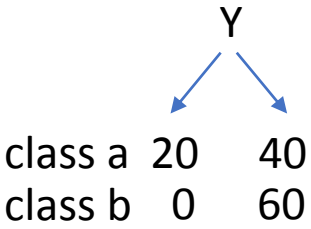


a) Mean, first derivative
b) Mean, percentiles
c) First derivative, mean
d) Percentiles, frequency
e) All of the pairs above are equivalent for distinguishing between the two series

Classification

- The two dataset splits depicted in the figure represent an intermediate step of Hunt's algorithm.
- Compute the Gini index of the two splits
  - Gini(X), Gini(Y)?
- Which of the two attribute splits will be selected by the algorithm?
  a. X
  b. Y





Hierarchical clustering

- Given the following distance matrix, apply agglomerative hierarchical clustering with single-linkage (min).
- Which statement is correct?
  a) With k = 3 clusters, *a* and *b* are in the same cluster
  b) With k = 2 clusters, *c* and *d* are in different clusters
  c) With k = 3 clusters, *b* and *c* are in different clusters
  d) With k = 2 clusters, *b* and *c* are in the same cluster
  e) All of the previous answers are correct

	a	b	c	d
a	0	1	4	3
b	1	0	2	4
c	4	2	0	3
d	3	4	3	0
