```java
package it.polito.bigdata.spark.exercise35;

import org.apache.spark.api.java.function.Function;

// Define a class implementing the Function<String, String> interface
public class ExtractDate implements Function<String, String> {
	// Implement the call method
	// The call method receives one reading/one record
	// and returns the date value
	public String call(String PM10Reading) {
		String date;

		// Split the line in fields
		String[] fields=PM10Reading.split(",");

		// fields[1] contains the date of the current record
		date=fields[1];
		return date;
	}
}
```
