Exercise #47

- Full station identification in real-time
- Input:
  - A textual file containing the list of stations of a bike sharing system
  - Each line of the file contains the information about one station
    - id, longitude, latitude, name
  - A streaming of readings about the status of the stations
    - Each reading has the format
      - StationId | #freeslots, #usedslots, timestamp
  - Output:
    - For each reading with a number of free slots equal to 0
      - print on the standard output timestamp and name of the station
